

10kW PV panel size

Overview

Is 10kW a good size for a solar panel system?

As you might gather from that example, 10kW is a particularly large size for a solar panel system. The average domestic solar installation in the UK in February 2025 was 4.6 kilowatt-peak (kWp), according to the Microgeneration Certification Scheme (MCS).

What is a 10kW Solar System?

You might also see a 10kW solar panel system referred to as a 10kWp (kilowatt peak) system. In this context, there's no difference between the two. How many solar panels are in a 10kW system?

The number of solar panels in a 10kW system depends on the power rating of the panels themselves.

How much space does a 10kW Solar System take up?

In terms of physical size, a 10kW solar system will take up about 594 to 950 sq. feet of real estate on your roof or yard, depending on the type of PV solar panels you have. Here's how we got those numbers: There are two types of solar panels to choose from today. Monocrystalline solar panels are more efficient but are pricier at the same time.

How much power does a 10kW solar panel produce?

A 10kW solar panel system has a peak power rating of 10 kilowatts, which means it'd generate 10,000 kilowatt-hours (kWh) of electricity per year in standard test conditions. These conditions include a cell temperature of 25°C and solar irradiance of 1,000W per square metre (m²), and is how every manufacturer checks its solar panels' abilities.
