

# 5g mini base station installation

## Overview

---

What is 5G network installation?

5G network installation includes the setup, deployment, and verification of new radios, antennas, fiber links, and power sources. The next-generation of radio access networks (RAN) also brings wholesale changes to fronthaul, mid-haul, and backhaul fiber installation to support split BBU architecture and network function virtualization (NFV).

What is a 4G & 5G LTE base station?

Covering all common 4G and 5G LTE bands, the base stations feature software-defined radio, allowing great flexibility of operation and future upgrade paths. The CableFree Advanced 4G and 5G LTE SDR (software-defined radio) Small Cell Base Station – Outdoor Version – is suitable for a wide variety of applications.

Which 3GPP base station supports 5G NR 5G New Radio?

The 3GPP 5G Next Generation base station which supports the 5G NR (5G New Radio). Therefore, we will setup the base station and configure it to be able to integrate the SDR, specifically, an URSPB200-mini. Quectel RM500Q-GL + Quectel 5G-M2 EVB.

How can a 5G base station be truly global?

To develop truly global 5G coverage, base stations will need to be installed across the world in some extremely inhospitable environments. This means that the new generation of base stations needs to be designed with environmental challenges and extreme weather in mind, such as the effects of humidity, heat and wind.
