

60V motor with inverter

Overview

Which inverter series is available for designing electronically controlled drives?

The extensive product range of SEW-EURODRIVE inverters is available for designing electronically controlled drives. SEW-EURODRIVE offers the following inverter series: MOVITRAC® B: Compact and inexpensive frequency inverter for the power range 0.3-175HP.

Why is a 40kHz PWM inverter a good choice?

With a traditional low-voltage 48V silicon field-effect transistor (Si-FET) inverter, the switching losses at 40kHz PWM can already be significantly higher than the conduction losses and hence dominate the overall power losses. To dissipate the excess heat, a larger heat sink is required.

Why do inverters lose power at 40kHz?

Conversely, the inverter losses increase with the switching frequency. With a traditional low-voltage 48V silicon field-effect transistor (Si-FET) inverter, the switching losses at 40kHz PWM can already be significantly higher than the conduction losses and hence dominate the overall power losses.

What is a low voltage 3 phase inverter used for?

Low-voltage 12V to 60V DC-fed three-phase inverters in the power range of 1kW are used in many applications such as collaborative and humanoid robots, automated mobile robots, automated guide vehicles (AGV), servo drives, and non-military drones.
