

Ankara Solar Water Pump Installation

Overview

How do you install a solar fountain pump?

Whether you want to install your converted solar fountain pump or your water pump to fill up your water tank, each installation involves those three main steps and come with its own sub-step. For instance, you'll have to mount and assemble a stand for the solar array.

How do you design a solar water pumping system?

When designing a solar pumping system, the designer must match the individual components together. A solar water pumping system consists of three major components: the solar array, pump controller and electric water pump (motor and pump) as shown in Figure 1.

How to install solar water pump?

The electrical ratings of the solar panels you get when working on how to install solar water pump will depend on the solar power needs of your solar pump. For us, 18 solar panels with a solar output of 300W each was sufficient. When wiring your solar water pump, the first thing you must do is connect the solar panels to each other.

How to choose a solar water pumping system?

The type of solar water pumping system: borehole/well (submerged), floating or surface will depend on the water source. If the source is a borehole (proposed or existing) or deep well, then a submersible pump that fits the borehole or well should be selected. If the water source is a river, then a surface pump should usually be selected.
