Are arc flash and arc-flash studies a safety concern?

Arc-flash and arc-flash studies are also clarified. This White Paper also highlights a safety concern when HV/MV switchgear fails catastrophically, particularly oil-filled switchgear assembly. Within IEC Standards, HV switchgear are used on systems above 1 kV up to 52 kV. In North America MV is any voltage between 600 V and 69 kV.

Are arc-flash sensors safe?

Sensors available in the market today detect light from an arc-flash inside switchgear very quickly, typically less < 100 ms, and trip the incoming supplies to the switchgear. Some concern has been expressed whether the sensors fail safe. North American Arc resistant testing standards are defined by ANSI/IEEE C37.20.7.

How do I know if a switchgear is IAC certified?

The IAC designations, verified by arc testing, are shown on the switchgear nameplate, along with the root mean square (r.m.s) arc fault current and duration. NOTE: IEC 62271-200 & IEEE C37.20.7 internal arc classifications enables benchmarking testing of switchgear, but it does not guarantee a specific performance in a substation building.
