

Are solar panels universal

Overview

What are the different types of solar panels?

The most common form of solar panels involve crystalline silicon -type solar cells. These solar cells are formed using layers of elemental silicon and elements such as phosphorus and boron. The elements added to the silicon layers form an n -type layer, which has an excess of electrons, and a p -type layer, which has a deficit of electrons.

Are solar panels a universal waste?

Currently, solar panels are not a federal universal waste, so generally generators cannot manage them as universal waste. However, some states have added solar panels as state-only universal waste.
