

Basic situation of new energy storage in the Netherlands

Overview

Is the Netherlands a good market for battery storage?

The Netherlands is an emerging market for battery storage but, due to the lack of saturation, also a highly exploitable one. In early 2025, Enspired, together with Flexcity and S4 Energy, reached an exciting milestone by taking the country's first 4-hour BESS live in a cross-market optimization setup.

Is there a roadmap for energy storage in the Netherlands?

In the Netherlands, there has also historically not been a roadmap or detailed industrial strategy with supportive legislation, policy, taxation reliefs, or investment incentives for the energy storage market.

Why should the Netherlands accelerate the energy transition?

The Netherlands must accelerate so as not to miss opportunities. Energy storage is the missing link in the energy transition. Without large-scale deployment of batteries, heat buffers and hydrogen storage, the Netherlands risks falling behind in Europe and becoming more dependent on foreign players.

What are the laws & regulations on energy storage in the Netherlands?

No specific laws & regulations: In the Netherlands, energy storage is not described in Dutch laws and regulations as a specific item. Standard requirements: It has to meet standard requirements for production and consumption and some specific technologies that are part of the energy storage system must comply with standardisation.

Basic situation of new energy storage in the Netherlands
