

# Benin solar Grid-connected Inverter

## Overview

---

Are solar PV projects feasible in Benin?

This study considers a 10.0 MW grid-tied system in seven different regions to evaluate the feasibility of solar PV projects in Benin. Grid-connected solar PV systems have two main components: the PV array and the inverter. The connection to the national grid is done using appropriate inverters that must be carefully selected (Etier et al., 2015).

Should Benin implement a grid-tied solar photovoltaic project?

The country must foster the development of policies that can accelerate the deployment of renewable energy projects and promote the use of new technologies for a cleaner and safer environment. The study results could guide Benin and other developing countries willing to implement a utility-scale grid-tied solar photovoltaic project.

Can solar power improve living standards in Benin?

The Benin Republic has abundant solar energy resource, which could be harnessed efficiently to increase its access rate to electricity and improve living standards. This study evaluates the techno-economic viability of installing a 10.0 MW utility-scale grid-tied solar photovoltaic (PV) system in seven cities located in Benin.

What is Benin's grid electricity mix?

Benin's grid electricity mix stems from diesel fuel (71.0%) and hydropower (29.0%). Fuels used for grid electricity generation at transmission and distribution losses of 18.0% generate a GHG emission factor of about tCO<sub>2</sub> 0.815/MWh for Benin.
