

# Berlin electric heating solar glass

## Overview

---

Will Berlin be able to use solar energy?

The plan is to shift Berlin's electricity and heat supply increasingly to solar energy over the coming decades. Although there are a lot of surfaces available, the number of new installations of such systems has recently been declining. Find existing solar systems and potential for expansion here. More information.

Are solar thermal systems becoming more popular in Berlin?

Overall, a declining trend has been observed since then. In Berlin, solar thermal systems are mainly used for hot water supply and to supplement space heating. In addition, some larger solar systems are used for heating drinking water and swimming pool water; they are further used for solar air systems and air conditioning systems.

What is solarzentrum Berlin?

To start tapping more into the potential of solar energy, both in the private and the public sector, the SolarZentrum (solar centre) Berlin was opened in May 2019. It is a component of the "Masterplan Solarcity", which works as an independent advisory centre on the topic of solar energy (SolarZentrum Berlin, only in German).

How much solar power does Berlin have?

According to the master plan study for the "Masterplan Solarcity Berlin", the State of Berlin owns 5.4 % of Berlin's buildings. Their roof surfaces account for 8.3 % of the solar potential (SenWEB 2019). On the public buildings in Berlin, there are 691 PV systems with a total installed capacity of 42.1 MWp (as of April 1, 2023).
