

Communication line construction base station line replacement

Overview

What is a radio base station reconfiguration procedure?

This procedure outlines the application procedure to be followed by the mobile services operators (hereinafter called the “operators”) for the reconfiguration of existing radio base stations NOT involving changes in the structural design and planning perspective of the parent building, and the change of land use.

What is a communication base station?

In the vast telecommunications network, communication base stations play a frontline role. Positioned closest to end users, they serve as gateways for processing customer requests and managing data flow. In the words of "Interesting Communication Engineering Drawings," these stations act like “business trackers,” always vigilant to:.

What is a telecommunications system (radio base station)?

A telecommunications system (radio base station) may comprise an equipment room/shelter which is a structure for housing power supply and transmission equipment and/or antennae which are fixed to roof parapet of a building or attached to supporting frames projecting from the external wall of a building. 2.

Can a radio base station be installed within a building?

The proposed radio base station installation within building is certified to constitute material change in use which necessitates submission of notification to the Building Authority under BO s25.
