

Comparison of 20MWh Energy Storage Container and Wind Power Generation

Overview

Can integrated energy storage system generate more revenue than wind-only generation?

The integrated system can produce additional revenue compared with wind-only generation. The challenge is how much the optimal capacity of energy storage system should be installed for a renewable generation. Electricity price arbitrage was considered as an effective way to generate benefits when connecting to wind generation and grid.

Can energy storage systems connect large-scale wind energy to the grid?

This study conducts a life cycle assessment of an energy storage system with batteries, hydrogen storage, or thermal energy storage to select the appropriate storage system. To compare storage systems for connecting large-scale wind energy to the grid, we constructed a model of the energy storage system and simulated the annual energy flow.

How a wind-storage coupled system can increase the initial investment?

When integrating the energy storage plant, it stores the wind power when the electricity price is low, and releases it when the price is high. The total income of the wind-storage coupled system can be significantly increased. However, it will increase the initial investment by adding energy storage system.

What types of energy storage systems are suitable for wind power plants?

Electrochemical, mechanical, electrical, and hybrid systems are commonly used as energy storage systems for renewable energy sources [3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16]. In , an overview of ESS technologies is provided with respect to their suitability for wind power plants.
