

# Emergency energy storage power supply specifications

## Overview

---

What is an emergency power supply system?

An emergency power supply system refers to a backup power source that operates in standby mode and provides power only during mains failure, ensuring reliability in various applications such as engine starting for standby power systems and emergency lighting in trains and marine environments. How useful is this definition?

.

What is an emergency power supply system (EPSS)?

The emergency power supply system (EPSS) is an independent power system, consisting of its own on-site power generation and distribution systems (whose normal power supply comes from Class III). This system belongs to Group II.

What is the capacity of emergency power supply?

Capacity ranges from 0.5kW to 800kW; According to the service object, emergency power supply can be divided into power load and emergency lighting. Its standby time is generally 90 to 120 minutes. If there are special requirements, it also be configured according to the design requirements of the standby time.

What are emergency and standby power systems?

Emergency and standby power systems are designed to provide an alternate source of power if the normal source of power, typically the electric utility service, should fail. Reliability of these types of systems is critical and good design practices are essential. Classification of Emergency and Standby Power Systems
