

Flexible support for solar panels

Overview

What is a flexible photovoltaic support system?

Max. Building Height : up to 65ft (22m), customized available The flexible photovoltaic support originates from the roof of suspension structure and glass curtain wall. It is a photovoltaic support system supported by suspension structure. The suspension structure consists of a series of tensioned cables as the main load-bearing components.

What are flexible solar panels?

Flexible solar panels are photovoltaic modules designed with bendable materials that allow them to conform to curved surfaces while maintaining their ability to generate electricity from sunlight.

Where can flexible solar panels be installed?

Flexible solar panels can be installed on a variety of surfaces, including decks, dodgers, bimini tops, and more. They offer marine advantages such as portability, allowing campers and outdoor enthusiasts to deploy solar power quickly and easily. These panels can be rolled up for storage and deployed when needed.

What is a photovoltaic support system?

It is a photovoltaic support system supported by suspension structure. The suspension structure consists of a series of tensioned cables as the main load-bearing components. These cables form various forms of systems according to certain laws and are suspended on the corresponding support structure.
