

# **Full power and peak power inverter**

## Overview

---

What is peak power in inverter?

Peak power is usually two to three times the rated power. The rated power is the power at which the inverter is stabilized over a long period, whereas the peak power is only used for short periods of high power demand. Learn More: [How does an inverter work](#) [What causes the inverter to overload?](#)

.

How much power does a full load inverter need?

Appliances of no-load operation needs 3 times inverter peak power value, and full-load operation ones need 7 times, so the peak number can be judged based on the motor drive load level.

When can an inverter start?

Because these inductive loads require a large current to start at the moment of startup, the appliance can start normally only when the inverter peak power is greater than the starting power of the appliance. Under normal circumstances, the peak power is equal to 2 times the rated power. 2. Different types of load.

How long does an inverter peak power last?

A: The peak power of an inverter generally only lasts for a few seconds, usually between 1 and 5 seconds, depending on the model and design. It is designed to cope with transient surges when an appliance starts, not for long periods. Understand the key differences between inverter peak power and rated power.
