How big an inverter should I use for a 48v85ah solar container lithium battery

Overview

What size solar inverter do I Need?

Your inverter size should match your solar array's capacity, not your electricity bill. This means your inverter doesn't need to power your entire home—it just converts whatever your panels generate. Let's say you have a 6kW solar array (twenty 300-watt panels).

Does a 48v battery work with a 5000W inverter?

A 48V 100Ah lithium battery (4.8kWh) paired with a 5000W inverter works because $48V \times 100Ah \times 1C = 4800W$. Always account for inverter efficiency losses (typically 85-95%). For mixed AC/DC loads, sum the wattage of all devices that might run simultaneously and add a 20% buffer.

How does the inverter size calculator work?

Our Inverter Size Calculator simplifies this task by accurately estimating the recommended inverter capacity based on your solar panel power and quantity. By inputting your panel's rated power and number of panels, the calculator produces a recommended inverter power range that aligns with 80-100% of your system's total DC capacity.

Why is the solar inverter and Battery sizing calculator important?

Our Solar Inverter and Battery Sizing Calculator provides a simple and user-friendly solution. It is much easier to use and more convenient. Here, you can make a list of possible setups. Why is this sizing calculation essential?

First, you can use your electronic gadgets in your home with confidence.
