

How to build the inverter for the island solar container communication station and connect it to the grid

Overview

Can a sunny island inverter be used on a stand-alone grid?

The AC sources must be suitable for stand-alone mode with Sunny Island (see technical information "PV Inverters in Off-Grid Systems" at [www.sunny.com](#)). The maximum output power of the AC sources in a stand-alone grid must be observed (see the Sunny Island inverter installation manual). The Sunny Island uses batteries for energy storage.

Can a sunny island inverter be installed in a cluster?

Only Sunny Island inverters of the same device type may be installed in a cluster: SI6.0H-11 or SI8.0H-11. In order to meet the requirements of off-grid systems, the Sunny Island has a high overload capacity. This overload capacity is subject to the battery being able to supply sufficient current.

How can a sunny island inverter synchronize with a generator?

The circuitry of the Sunny Island inverters forming a cluster and the circuitry of several clusters in a system must be carried out in accordance with this documentation (see Section 3 "Information and System Description", page 11). The Sunny Island can synchronize with a generator and connect directly, if necessary.

What should I do if my Sunny Island inverter is off-grid?

Ensure that the off-grid system cannot be reconnected. Open the enclosure lid on the Sunny Island inverter and ensure that no voltage is present in the device. Ground and short-circuit the AC conductors outside the Sunny Island inverter. Cover or isolate any adjacent live components.
