We put solar panels on a container for a guy who was powering an RV on his land. He had a generator, and the container was full of batteries to support himself. When we're on top of a container, we need to build a custom racking system to hold up more than one row of panels, which is what we ended up doing for him. (See in image with tan container.).

Should I add a battery to my solar system?

The approach depends entirely on your current equipment. If your existing solar system works well, AC-coupled battery addition offers the simplest upgrade path. This approach installs a separate battery inverter alongside your existing solar inverter, allowing both systems to operate independently.

Should I Retrofit batteries to my existing solar system?

Retrofitting batteries to existing solar installations presents unique challenges and opportunities. The approach depends entirely on your current equipment. If your existing solar system works well, AC-coupled battery addition offers the simplest upgrade path.

Does outdoor battery installation need weather protection?

Outdoor battery installation requires more planning but remains perfectly viable with proper protection. Weather protection isn't optional – it's mandatory for warranty compliance. Modern batteries carry IP65 ratings (protected against water jets), but manufacturers now require protective canopies for external installations.
