

How to protect the safety of solar container communication station energy storage equipment

Overview

Do energy storage systems need application-specific protection?

As demand for electricity becomes ever greater, the need to store energy (as well as produce it) also does. Like all electrical installations, energy storage systems need application-specific protection. Energy Storage Systems (ESS) are now a mature technology.

How to protect high-end electronics in storage containers?

In addition, battery storage for the power grid forms the basis for energy management (so-called “peak shaving”). In order to provide optimum protection for the high-end electronics in storage containers, one needs a comprehensive lightning and surge protection system.

Are beyond-Li-ion energy storage technologies safe?

Safety and degradation of beyond-Li-ion technology: Many emerging energy storage technologies are presented as ‘safer’ alternatives to Li-ion systems. Full, rigorous FMEAs still need to be completed for these new technologies to understand their unique safety and degradation profiles.

How do I protect my ESS equipment from over-voltage?

Surge protectors on the AC part are also recommended, as well as air conditioning to cool the batteries. The critical point is the protection of the battery storage system, for this reason, and with the following consequences: LSP's R&D teams have developed specific products to protect your ESS equipment against over-voltages.
