

How to replace the base station power supply

Overview

How do I replace a power supply unit?

Once you've identified that you need to replace the power supply unit in your tower or desktop computer, follow the steps below. The replacement is simple enough, first you'll need to remove the old power supply, and then install the new one in its place.

How do I replace a PSU?

The power supply is held into the computer case by mounting screws. Locate and unscrew these. Remove the old power supply unit and cabling. Installing the replacement power supply unit is basically the reverse of the steps you did to remove the old PSU.

How do I install a new power supply unit?

Mount the new power supply unit into the computer case by using the case mounting screws. Reconnect the internal wiring from the output of the power supply unit to the hardware components inside your computer case. Be sure to refer to the notes/photos that you took in the removal stage to make sure that all the components are reconnected.

Do I need to replace my power supply if I upgrade?

Sometimes when you upgrade your PC, you will find that current power supply isn't powerful enough to support your new system. If you need to replace your power supply, here is how. Unscrew and remove the side panel of your tower and locate the power supply.
