## Overview

---

What is a crystalline silicon photovoltaic module?

In 2011, they represented above 85% of the total sales of the global PV cell market. The Crystalline silicon photovoltaic modules are made by using the silicon crystalline (c-Si) solar cells, which are developed in the microelectronics technology industry.

What are multi-crystalline silicon solar modules?

Multi-crystalline silicon solar modules are better known as Polycrystalline solar modules. Crystalline silicon cells are fabricated with silicon atoms that are connected and create a crystal lattice. Such lattice offers a well-organized structure that facilitates the efficient conversion of sunlight into electricity.

How much does non Xinjiang polysilicon cost?

Currently, non-Xinjiang polysilicon with traceability data generally carries a quoted premium of RMB 3-5/kg. Polysilicon prices in dollar terms are prices for polysilicon with non-China origins in dollar terms, not translated from RMB prices.

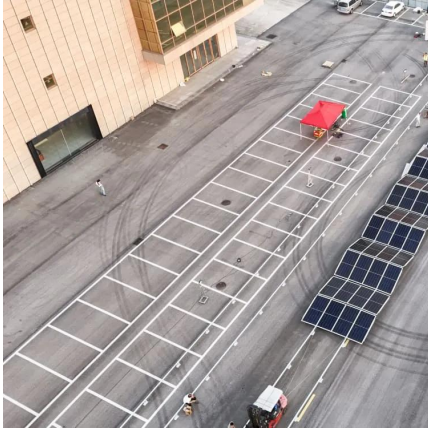

What is the efficiency of crystalline silicon solar cells?

Coming to the efficiency of crystalline silicon PV cells, it varies with different types. Mono-crystalline silicon PV cells have an energy conversion efficiency of more than 25%, and that of polycrystalline cells is around 20%. Some major advantages of crystalline silicon solar cells are:
