

# **Huawei produces solar panels in Austria**

## Overview

---

How much solar power does Europe have in 2023?

As of the end of 2023, the European Union's (EU) total solar photovoltaic (PV) capacity reached approximately 260 gigawatts (GW), marking a significant increase from 205 GW in 2022. This growth underscores Europe's commitment to expanding renewable energy sources and reducing reliance on fossil fuels.

How much does a solar PV system cost in the EU?

However, the cost can vary depending on a few factors, such as the size of the system, the type of solar panels, and where you live in the EU. On average, a residential solar PV system in the EU can cost anywhere between €4,000 and €10,000 for a standard 3 to 5 kW system, which is typically enough for an average household.

How do EU countries support solar adoption?

Many EU countries support solar adoption through various incentives, including tax breaks, subsidies, and rebates. Programs like net metering allow households to offset their electricity costs by feeding excess power back into the grid, making the financial case for solar even stronger.
