## Overview

---

Can you put solar panels on a container?

We put solar panels on a container for a guy who was powering an RV on his land. He had a generator, and the container was full of batteries to support himself. When we're on top of a container, we need to build a custom racking system to hold up more than one row of panels, which is what we ended up doing for him. (See in image with tan container.).

Can a containerized Solar System be installed off-grid?

Off-Grid Installers have the answer with a containerized solar system from 3 kW up to 10 kW. Systems are fitted in new fully fitted containers either 20 or 40 feet depending on the size required.

What is an off-grid solar container unit?

Attaching to the grid can also be expensive and this can be an issue in the UK as well as Africa or Latin America. An Off-Grid solar Container unit can be used in a host of applications including agriculture, mining, tourism, remote islands, widespread lighting, telecoms and rural medical centres.

Are off-grid solar containers reliable?

Solar equipment is very reliable but occasionally parts may fail so there is a need to monitor and solve any problems. Off-Grid Solar container units guarantee security and reliability and allow the engineering team to complete installations in a few days rather than weeks.
