

# **Is the 5g base station signal good for communication sharing**

## Overview

---

Are 5G base stations 3GPP compatible?

In conjunction with 5G NR, private base stations (BS) can support connectivity for different spectrum bands (sub-GHz, 1 to 6 GHz, or mmWave). The 5G base station products must pass all of the test requirements prior to their release. Otherwise, the products are not 3GPP-compatible or appropriate to implement in a network.

What is a 5G base station?

At the same time, a large number of 5G base stations (BSs) are connected to distribution networks, which usually involve high power consumption and are equipped with backup energy storage, giving it significant demand response potential.

Can 5G support massive number of radio networks?

The authors in proposed a novel SS technique for supporting massive number of radio networks. Moreover, the authors proposed a 5G amenable novel service-enabled network management architecture for integrating ML techniques for radio resource management and SS.

Are 5G base stations able to respond to demand?

5G base stations have experienced rapid growth, making their demand response capability non-negligible. However, the collaborative optimization of the distribution network and 5G base stations is challenging due to the complex coupling, competing interests, and information asymmetry among different stakeholders.

## Is the 5g base station signal good for communication sharing
