Italian mobile energy storage project

Overview

Does Italy have a new battery energy storage system?

Italy has taken a major step forward in its energy transition efforts, giving the green light to 361 MW of new battery energy storage systems (BESS) spread across three regions—Lazio, Puglia, and Sardinia.

What will Italy get from a battery storage tender?

Winning participants of the tender will receive fixed revenues over a 15-year contract for capacity made available to the grid. Italy broke new ground in energy storage with its very first battery storage auction, competitively awarding the full 10 gigawatt hours (GWh) of capacity put up for tender.

Why should we invest in Italy's digitised energy infrastructures?

The company's commitment translates into both proprietary solutions and adaptation - already today - to the most stringent EU requirements for digitised energy infrastructures. The Italian storage market also represents a key test bed for large-scale integration of renewables and smart grid management.

How much did Italy invest in the first battery storage auction?

Additionally, Enel, the country's dominant energy utility, secured more than half of the auction's capacity across five projects. According to grid operator Terna, total investment from Italy's first battery storage auction is estimated to be around €1 billion. Developer: Portugal-based GreenVolt Location: Southern Italy, Calabria region
