

Ka3525a inverter voltage regulation

Overview

What is a ka3525a circuit?

The KA3525A is a monolithic integrated circuit that includes all of the control circuits necessary for a pulse width modulating regulator. There are a voltage reference, an error amplifier, a pulse width modulator, an oscillator, an under-voltage lockout, a soft start circuit, and the output driver in the chip.

What are the components of ka3525a?

There are a voltage reference, an error amplifier, a pulse width modulator, an oscillator, an under-voltage lockout, a soft start circuit, and the output driver in the chip. Product services, tools and other useful resources related to KA3525A.

What is a ka3525a inverter?

The KA3525A demonstrates its adaptability and effectiveness across numerous consumer power electronics applications. This integrated circuit is required to create pure sine wave inverters, ideal for delivering smooth, dependable power in various appliances. Precision in pulse-width modulation minimizes waveform distortion, enhancing performance.

What voltage does ka3525a support?

Packaged in a 16-pin housing, the KA3525A supports a reference output current of 50mA and a supply voltage up to 40V. It operates within a temperature range of 0 to 70 degrees Celsius and can handle significant energy levels with a sink current up to 500mA and power dissipation of 100mW.
