## Overview

---

What is LCoS in energy storage?

The total lifetime cost of the storage system (including operating and maintenance costs) is divided by the total amount of electricity the system is expected to store during its life. LCOS, thus, offers a more detailed perspective on the economic viability of energy storage over the long term; a lower LCOS implies greater cost efficiency.

How long does a PV solar system last?

In general, the payback time can range from 5 to 10 years. However, it depends on several factors, such as the initial cost of the system, available incentives, rebates, the cost of electricity where you live, and the amount of PV solar electricity you can store and use.

How much does lithium ion battery energy storage cost?

Statistics show the cost of lithium-ion battery energy storage systems (li-ion BESS) reduced by around 80% over the recent decade. As of early 2024, the levelized cost of storage (LCOS) of li-ion BESS declined to RMB 0.3-0.4/kWh, even close to RMB 0.2/kWh for some li-ion BESS projects.

Will Li-ion Bess be the cheapest energy storage technology?

By 2030, the average LCOS of li-ion BESS will reach below RMB 0.2/kWh, close to or even lower than that of hydro pump, becoming the cheapest energy storage technology. Energy storage addresses the intermittence of renewable energy and realizes grid stability.
