

# Make double glass components

## Overview

---

How are double hung windows made?

Traditional double-hung windows used a single pane of glass to separate the interior and exterior spaces. The major manufacturing process for creating insulated glass includes glass cutting, glass edging, glass washing assembly, gas filling, glazing and packaging.

What is a spacer in a double glazed window?

Spacers are components used in insulating glass (IG) units. They are specifically designed to separate and maintain the distance between the two panes of glass in a double or triple glazed window.

How is insulated glass made?

The major manufacturing process for creating insulated glass includes glass cutting, glass edging, glass washing assembly, gas filling, glazing and packaging. The two panes of glass that will be used to make the sealed unit are measured and cut to size either by hand or using an automatic cutting table.

What is a double pane window?

A double pane, also known as double-glazed or insulated glass, refers to a window or glass panel that consists of two layers of glass separated by a space filled with air or inert gas, such as argon. These layers are sealed together around the edges to create a single unit.
