

# Maximum width of solar tempered glass

## Overview

---

Are all fabricators able to heat-treat standard glass sizes?

It's important to understand that not all fabricators are equipped to process and/or heat-treat standard glass sizes. Minimum and maximum sizes are dictated by: Minimum and maximum sizes available for glass panels must be determined by fabricators. Learn more on Guardian Glass glossary.

How do I determine the minimum and maximum glass sizes available?

To determine the minimum and maximum sizes available for finished glass products, the glass fabricator must be consulted. Physical/mechanical capabilities and constraints of the fabricator will affect the final finished glass size availability. Special considerations for oversized glass: IGUs and heat treatment.

What standards are used in insulating glass?

Laboratory measured to the ISO 140-3 standard. Monolithic, unlaminate clear glass tested. Laboratory measured to the ASTM E90-09 standard. Other configurations are available through special order. \* Insulating glass unit constructed of two lites of equal glass thickness and 1/2" (12.7 mm) airspace.

What are the production standards for glass?

Production standards: Laminated glass EN14449:2005 Tempered glass EN12150-2:2004 Insulated glass EN1279-3:2005 Bulletproof glass: Br1 - Br7 Through years of producing glass, we have built our factory around optimizing production time and quality.
