

New battery project for energy storage in the Netherlands

Overview

Why are batteries so important in the Netherlands?

Batteries are indispensable for the energy transition. Yet the development of battery projects in the Netherlands lags behind that in other countries. This is because batteries in the Netherlands have to pay to take power from the grid.

How big is the energy transition in the Netherlands?

ESNL adds to the numbers The energy transition in the Netherlands gets a powerful boost: follows the the data from CBS counted at the end of 2024 our country 84 large-scale battery storage systems (≥ 1 MWh), accounting for a combined capacity of 350 megawatts (MW) and a total storage capacity of 620 megawatt hours (MWh).

How has the battery industry changed in the Netherlands?

The growth is nothing short of impressive. In one year, the number of large-scale batteries in the Netherlands more than doubled: from 40 in 2023 to 84 in 2024. Storage capacity increased by 81 percent, from 343 to 620 MWh. Installed capacity also increased significantly: from 229 MW to 350 MW, an increase of 53 percent.

Who is responsible for battery development in the Netherlands?

Enecogen is responsible for maintenance and operations. The EP NL and Eneco trading departments control the battery. Batteries are indispensable and acceleration is necessary. Batteries are indispensable for the energy transition. Yet the development of battery projects in the Netherlands lags behind that in other countries.
