

Oslo solar Glass Greenhouse Construction

Overview

Why did they build a greenhouse in Norway?

Driven by the harsh local climate and a desire for homegrown food, they incorporated a greenhouse into their design. The greenhouse was erected before the house. This preemptive construction ensured it could withstand Norway's heavy snowfall, which can reach up to 1.5 meters in winter.

What is a greenhouse & how does it work?

The greenhouse keeps the home warm and insulated even on cold winter days. The house itself, enclosed in the glass structure, is made of beautiful wood, has big open windows, and looks like a dream to live in. This gorgeous and sustainable home combines indoor and outdoor living in a way I've never seen before.

What makes a home with a greenhouse unique?

The interior of the home with a greenhouse reflects a commitment to both functionality and aesthetics. The kitchen, with its extensive glass walls, is designed to stay open to the greenhouse in summer, providing easy access to fresh herbs and fruits.

Can a greenhouse withstand snow?

The greenhouse was erected before the house. This preemptive construction ensured it could withstand Norway's heavy snowfall, which can reach up to 1.5 meters in winter. The greenhouse's glass and steel frame supports the snow load, while the roof's angle allows snow to slide off in the sun.
