

Procurement Contract for High-Voltage Photovoltaic Storage Containers

Overview

What is a PPA for new energy storage resources?

Some PPAs for new energy storage resources have been structured as capacity-only contracts in which the developer is responsible for the sale of energy and all costs associated therewith—including the costs of the required energy procured from the utility.

How do energy storage contracts work?

For standalone energy storage contracts, these are typically structured with a fixed monthly capacity payment plus some variable cost per megawatt hour (MWh) of throughput. For a combined renewables-plus-storage project, it may be structured with an energy-only price in lieu of a fixed monthly capacity payment.

What are the different types of procurement contracts?

There are three key types of procurement contracts—power purchase agreements (PPAs) or energy storage services agreements; engineering, procurement, and construction (EPC) agreements; and build-transfer agreements (BTAs)—and several key risks that must be allocated between the parties.

What is a power purchase agreement (PPA)?

Power Purchase Agreements A PPA for new resources typically covers 100% of the output of the project, including full dispatch and charging control. For standalone energy storage contracts, these are typically structured with a fixed monthly capacity payment plus some variable cost per megawatt hour (MWh) of throughput.
