# Rooftop solar panel application

## Overview

---

What is a rooftop solar photovoltaic system?

A rooftop solar photovoltaic (PV) system uses solar panels mounted on the roof of a building to convert sunlight into electricity. Rooftop solar systems rely on the photovoltaic effect, where cells generate electricity in response to sunlight.

How do you install a rooftop solar PV system?

Take the wires from each solar panel and connect them to the solar inverter, which converts the electricity generated by the array from DC into AC, and then connect the solar inverter to the electrical panel. What are the things to consider before installing Rooftop Solar PV Systems?

How does a rooftop solar PV system work?

Converts solar energy into electricity. This can be used to meet the building's own energy consumption requirements or, in certain situations, fed back into the electrical grid. Rooftop solar PV systems are distributed electricity generation options, which help to meet a building's energy needs, or provide electricity within.

Can rooftop solar be installed on a brick-and-mortar building?

Rooftop PV systems are used on residential and commercial buildings, but traditional brick-and-mortar buildings are not the only candidates for rooftop solar installations. Structures whose roofs have smaller surface areas, like sheds, cabins and RVs, are able to support rooftop solar systems fitted to their size.
