

Solar cell independent power generation system

Overview

What is an independent photovoltaic power generation system?

An independent photovoltaic power generation system is also called an off-grid photovoltaic power generation system. Typically, the independent photovoltaic power generation system is mainly composed of solar arrays, solar controllers, and storage batteries.

What are the structural units of a solar power generation system?

The basic structural units of the power supply part of the solar power generation system include: photovoltaic array, battery and controller. Solar energy is a type of radiant energy that must be converted into electricity with the help of an energy converter, which is called a .

How does a photovoltaic power generation system work?

Typically, the independent photovoltaic power generation system is mainly composed of solar arrays, solar controllers, and storage batteries. When there is sunlight, the photovoltaic power generation array provides power to the load and charges the battery. In other cases, the battery provides power to the load.

What is a municipal supplementary photovoltaic power generation system?

The municipal supplementary photovoltaic power generation system is based on solar power generation in an independent photovoltaic power generation system, supplemented by ordinary 220V alternating current supplementary electric energy.
