

Solar glass inclined roof installation

Overview

What is solar panel roof mounting?

Solar panel roof mounting is the process of securely attaching photovoltaic panels to your home's roof structure using specialized mounting systems. This critical installation step determines both the safety and performance of your solar energy system for decades to come.

How do you install a solar roof?

Installation involves drilling through shingles into rafters and sealing with flashing. Standing seam metal roofs are ideal for solar installation, using non-penetrating clamps that attach to the seams. Corrugated metal requires specialized brackets secured with galvanized screws. Clay, concrete, and Spanish tiles present unique challenges.

Should I install solar panels on an older roof?

Consider Installing a New Roof: Installing a new roof that lasts as long or longer than the expected service life of the solar array is usually the most prudent decision. Installing solar panels on an older roof is not recommended, as it will likely need to be replaced before the PV system.

Do I need a structural assessment before installing solar panels?

Before mounting solar panels, your roof must undergo a thorough structural assessment. Solar panels and mounting equipment add approximately 3-4 pounds per square foot of additional load to your roof structure. Key evaluation factors include: If your roof needs replacement, complete this work before solar installation.
