Overview

What is a solar panel system?

A solar panel system is a setup that converts sunlight into electricity. It is made up of different parts that work together. Here are the main ones: Solar panels - These are the panels you see on rooftops. They are made of photovoltaic (PV) cells that catch sunlight.

How do solar panels work?

Solar panels work by converting sunlight into electricity through a process called the photovoltaic effect. This process produces direct current (DC) electricity, which then needs to be converted to alternating current (AC) electricity for your home to use.

What are the different parts of a solar system?

It is made up of different parts that work together. Here are the main ones: Solar panels - These are the panels you see on rooftops. They are made of photovoltaic (PV) cells that catch sunlight. Inverter - This device changes direct current (DC) from the panels into alternating current (AC), which is what your home uses.

What are the components of a solar PV system?

A Solar Photovoltaic (PV) system converts sunlight into electricity and comprises several key components that work together to generate, regulate, and supply power. Here are the main components of a Solar PV system: Solar panels are the core component of any PV system. They capture sunlight and convert it into electricity.
