

Solar panels micro-inverter for home use

Overview

What is a microinverter solar inverter?

Microinverters are a type of solar inverter technology installed at each panel. Microinverters offer many benefits, such as rapid shutdown capabilities, flexibility for panel layouts, and panel-level monitoring and diagnostics. Microinverters are typically more expensive than traditional string inverters.

Do solar panels need inverters?

Unleashing the power of your solar panels requires more than just sunlight. Inverters are essential components of every solar panel system. Think of it like this: Solar panels capture energy from sunlight. Inverters harness that energy to create electricity compatible with your home.

Should you use a microinverter or a central solar inverter?

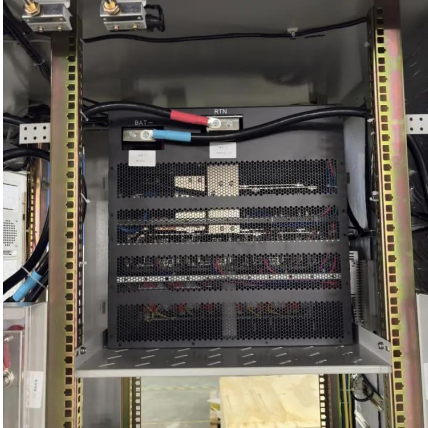

Suppose that in the future, your energy needs will rise. Instead of matching a central solar inverter's power output to your new system size, you can use microinverters to add more panels. You can expect a longer lifespan because the microinverter guarantee is often for the same time as the connected panels (usually 25 years).

Are micro inverters a good choice for your home?

In conclusion, micro inverters are a good choice for your home if your system design is more complex, like if you have panels on multiple roof planes. Additionally, you should use microinverters if your panels are partially shaded during the day.
