Solar panels on flat roofs

Overview

Can solar panels be installed on a flat roof?

Yes, you can absolutely install solar panels on flat roofs. In fact, flat roof installations often outperform sloped roof systems when properly designed and installed. The key is understanding that panels should never be installed completely flat against the roof surface.

How much do flat roof solar panels cost?

Flat roof solar panels can cost between £2,800 - £12,100 for the average 2 to 3 bedroom house. Flat roof solar panels cost less in terms of labour costs since installation is easier (however this depends on your roof). One downside of putting solar panels on a flat roof is that they take up more space per kW.

How do flat roof solar panels work?

Unlike traditional pitched roof installations where panels follow the natural slope of the roof, flat roof solar panel systems are installed at a tilt using a mounting system. This allows installers to position the panels at the optimal angle for maximum sunlight exposure and energy production.

Should solar panels be installed flat or sloped?

In fact, flat roof installations often outperform sloped roof systems when properly designed and installed. The key is understanding that panels should never be installed completely flat against the roof surface. Solar panels require a minimum tilt angle of 10 degrees to function optimally and maintain manufacturer warranties.
