

Tunisia Energy Site

Overview

Does Tunisia rely on gas?

Tunisia mostly relies on gas imports to meet its primary energy needs: almost 97% of its electricity generation came from gas in 2016. However, energy policy puts the emphasis on renewable energy. Electricity generation from wind power strongly increased.

What is the energy sector in Tunisia?

Revised in November 2024, this map provides a detailed view of the energy sector in Tunisia. The locations of power generation facilities that are operating, under construction or planned are shown by type - including gas and liquid fuels, natural gas, hybrid, hydroelectricity, solar (PV and CSP), wind and biomass/biogas.

How can Tunisia increase its energy access rate?

Tunisia must build up and expand its power generation system to increase the energy access rate to 100%. Building new power plants - no matter the technology - will require new infrastructure (including power grids), spatial planning, a stable policy framework, and access to finance.

Does Tunisia have a good electricity infrastructure?

The updated infrastructure map shows that Tunisia's electricity infrastructure has been significantly expanded relative to the 2017 data plotted in Figure 2, with a range of interconnection ratings spanning the country (90 kV, 150kV, 225kV, 400kV).³⁷ It is necessary to analyse the development of the past energy demand to project that of the future.
