

# **Tunnel boring machine emergency communication command base station**

## Overview

---

The tunnel emergency communication solution builds the backbone transmission network and data access network through the BF-TR925 Ad hoc network base station, ensuring smooth communication between the rescue site and the command center, allowing leaders and experts outside the tunnel to see and hear the situation inside. How does an emergency telephone tunnel work?

The emergency telephone tunnel host is placed in the adjacent tunnel station, base station, relay station machine room or directly in the tunnel with the machine room conditions, and is connected to the emergency telephone terminal in the tunnel in a collinear manner through a 3x4x0.9 long-distance low-frequency symmetrical cable.

What are tunnel boring machines?

These machines are widely used in constructing metro tunnels, water pipelines, railway corridors, and underground utilities. In this guide on Tunnel Boring Machines: Working, Types, and Applications, we'll explore their components, functionality, benefits, and real-world use cases in modern infrastructure.

How is tunnel boring technology changing?

TBM technology is evolving with the adoption of AI, automation, and digital control. These improvements are making tunneling faster, safer, and more intelligent. What is the main purpose of tunnel boring machines?

.

How are emergency telephone terminals installed?

Emergency telephone terminals can be installed on both sides of the tunnel, with a distance of 400~500m on one side. The emergency telephone system console can usually be set up in the emergency command center and dispatching hall. It can be connected to the main system of the control center

through the U port or E1 interface.
