

Uninterruptible power supply for Venezuelan households

Overview

Why does Venezuela have a poor electricity system?

Since 2008 or even before, likely up to now, Venezuela has had an electric system in critical condition that is not able to satisfy the electricity demand, which has fallen because of the severe economic crisis, and offers very low-quality services.

Does Venezuela's electricity system collapse?

In this paper, the collapse of Venezuela's electricity system is analyzed. Two well-known recovery plans, the Venezuelan Electricity Sector Recovery Plan (VESRP) and the Country Plan Electricity (CPE), are described in detail, and their challenges are discussed in the context of the energy transition paradigm.

What are the statistics on electricity production in Venezuela?

Since 2009, there have been no official statistics on the electricity and energy sectors. Since the end of the 19th century, the production of electricity has been steadily growing in Venezuela. In between, there were some jolts due to prolonged droughts associated with the El Niño phenomenon.

How has Venezuela impacted the energy sector?

Since 2013, Venezuela has been confronting a profound political, social, and economic crisis with a strong negative impact on the country's energy sector. The crisis has severely affected the production of oil, natural gas, fuels, and electricity (Monaldi et al., 2021).
