

What are the solar systems in Sucre

Overview

What is the main source of energy in the Solar System?

It includes: the satellites of the planets; numerous comets, asteroids, and meteoroids; and the interplanetary medium. The Sun is the richest source of electromagnetic energy (mostly in the form of heat and light) in the solar system.

Where is the Solar System located?

The solar system is located in the Milky Way's Orion star cluster. Only 15% of stars in the galaxy host planetary systems, and one of those stars is our own sun. Revolving around the sun are eight planets. The planets are divided into two categories based on their composition, terrestrial and Jovian.

What planets circle the Sun?

There are small planets, like Mercury, barely one and a half times larger than our Moon, and giant planets, the biggest being Jupiter, more massive and voluminous than the seven others put together. All of them circle the Sun, taking more or less longer to do so according to how far they are from our star.

Where is the Sun located in the Solar System?

The orbits of the planets and other bodies of the solar system. Located at the center of the solar system and influencing the motion of all the other bodies through its gravitational force is the Sun, which in itself contains more than 99 percent of the mass of the system.
