What is a TLS Bess container?

TLS BESS containers feature advanced grid monitoring and control devices that communicate with the EMS, enabling seamless synchronization with grid operations and providing ancillary services such as frequency regulation and voltage support.

What is EMS communication?

EMS communication refers to the exchange of data and instructions between the Energy Management System and various components within a BESS container. The EMS serves as the central intelligence hub, orchestrating the operation of batteries, inverters, monitoring devices, and other subsystems to achieve optimal performance objectives.

What data formats are provided in the study solar resource?

Download country factsheets, tabular data and the Study Solar resource (GHI, DNI, DIF, GTI, OPTA), PV power potential (PVOUT) and other parameters are provided in the form of raster (gridded) data in two formats: GeoTIFF and AAIGRID (Esri ASCII Grid). Provided data layers are in a geographic spatial reference (EPSG:4326).
