

Wind power generation system in 2025

Overview

How much wind energy will be installed in 2025?

Loading. The 2025 Global Wind Report reveals record growth in wind energy, with 117 GW of new capacity installed in 2024. While highlighting challenges like policy instability and market fragmentation, the report forecasts significant expansion, with 981 GW of new capacity expected by 2030.

How has the world's wind power sector changed in 2025?

The world's wind power sector recorded strong growth in the first half of 2025, with global installations rising by 64% compared to the same period of 2024. A total of 72,2 gigawatts (GW) of new capacity were added between January and June 2025, following 44,1 GW installed in the first half of the previous year.

How much wind power does China have in 2025?

As of May 2025, China added 46 GW of new wind capacity for the year, bringing the total to 570 GW of operating capacity. A notable project is the Omattingga Wind Farm in Tibet, a 100 megawatt (MW) installation that is the world's highest-altitude wind farm. At 4,650 meters high, it produces about 200 gigawatt hours (GWh) annually.

What is the global wind report 2025?

The Global Wind Report 2025 highlights four major challenges facing the sector: financial and macroeconomic pressures, rising trade barriers and market fragmentation, inadequate procurement and auction systems, and difficult investment conditions across the global wind supply chain.
