

Wind power station control system

Overview

What is a wind farm control system?

The wind farm control system fits most grid codes, and typically consists of a wind farm controller, cluster controller, grid station, weather station, fully tested advanced automation software, and associated services.

What are wind turbine control solutions?

The wind turbine control solutions embrace automation systems for wind turbines and wind farms. A broad range of wind turbine control systems can be used for off-shore and/or on-shore wind power generation and wind farm management. These solutions assist wind turbines and farms to operate smoothly and cost-effectively.

How a wind turbine control system works?

The control system, together with the integrated wind turbine control unit and SCADA technology, can help manage both individual wind turbines and the wider wind farm resources to help reduce turbine generator downtime and increase availability. The wind turbine control solutions embrace automation systems for wind turbines and wind farms.

What is wind control center?

These individual turbines, substations, meteorological stations, and other wildlife monitoring systems are connected to the central control room in Wind Control Center. It provides visibility to the operator to oversee the behavior of all wind turbines on all wind farms.
